

Staff and Physician Fit Testing Pathway *

* Minor variation may occur at the regional level (e.g. quantitative vs qualitative method, forms used, etc.)

** Staff and physicians may be fitted to more than one respirator to ensure multiple options during the COVID pandemic

*** 3M 8210 is not fluid resistant and therefore, requires a face shield when used. Note: no limitations exist on which areas or roles can use it.

**** Role is critical to clinical needs and requires exposure to AGMPs on suspect or confirmed COVID patients and/or care for patients on airborne precautions (e/g/TB, disseminated shingles)

***** Final option for fit testing may vary based on types of respirators available
