

Health Networks in Saskatchewan

Elevator Speech – Internal Use

September, 2019

- Health Networks **are collaborative teams of health professionals**, including physicians, and community partners providing fully integrated services to meet the health needs of individuals and communities.
- As these teams are developed, people can expect better coordination and access to care, as our current system is not always well coordinated.
- Creating Health Networks is about the **right care at the right time from the right health care provider as close to home as possible.**
