

Physical Security Protects Sensitive Assets

Intruder alert! Intruder alert!

If our equipment gets stolen, the consequences extend far beyond the monetary value: sensitive information could be lost or disclosed.

How can you prevent that from happening? Physical security is none of your business, right?

Wrong! When you physically protect documents and equipment used to process or store information, you reduce the risk of unauthorized access to our sensitive information.

Think Twice!

Help protect our assets by respecting our physical security measures, such as electronic locks and visitor's logs.

Be the strong link!

- ☑ Lock away files, folders and documents containing sensitive information at the end of the day or when you temporarily leave your workspace.
- ☑ Always carry your mobile devices with you and promptly report the loss or theft of computer equipment to the service desk immediately.
- ☑ If you were issued an identification or access card, display it properly at all times.
- ☑ Courteously remind anyone trying to follow you in that they should obtain a temporary card from the reception/security desk.

If you suspect you've received a suspicious email, forward it (as an attachment) to emailsecurity@eHealthSask.ca and delete it from your inbox. Report any security-related incidents immediately to ServiceDesk@eHealthSask.ca

We appreciate your help in protecting the Saskatchewan health network.
