TEST TO PROTECT 

## SD Biosensor Rapid Antigen Test

### Your testing kit contains:

- 1. silica gel pack (do not use test if beads are green)
- 2. nose swab
- 3. tube
- 4. dropper lid
- 5. test unit

Adapted from SD Biosensor product insert — Updated Jan. 19, 2022

Do not eat or drink for at least 30 minutes before taking the test.

Follow the instructions carefully for accurate results.

Using the same swab, put the swab into your nostril about 2cm (for small children, just put the swab into the nostril). Rub and rotate the swab vigorously 5 times, for at least 15 seconds. Repeat for the other nostril using the same swab (your eyes may water).

### Before you start:

- ✓ Clean your hands.
- ✓ Place paper towel on a clean, level surface.
- ✓ Open the contents of your testing kit.
- ✓ Place tube in stand so that it is upright.
- ✓ Write your name with marker or pencil on the unit if testing more than one person.

Squeeze the liquid out of the swab by pinching the tube and slowly pulling the swab out (a). Throw out the swab. Put the dropper lid on the top of the tube (b) and turn it upside down to gently squeeze 4 drops of liquid into the small round well of the test unit (c). **CAUTION:** the drops come out quickly. Leave the test unit on a level, flat surface for 15 minutes (d).

The area that displays the results will turn pink before turning back to white when it is time to read the results.

### Results (after 15 – 30 minutes)

Negative: one line at the C (control) mark, no line at the T (test) mark

Positive: two lines. One line at the C (control) mark, one line at the T (test) mark

### Please note:

- A single negative result cannot be used to rule out COVID-19.
- Stay at home if you have symptoms and repeat the test in 48 hours.

### You must:

- Isolate immediately.
- Follow direction set forth by the [Government of Saskatchewan](#).
- Inform all close contacts.

INVALID TEST – If your test **DOES NOT MATCH** either the negative or positive examples. Repeat test.
