

- Connected Care is a key priority for the Saskatchewan Health Authority. One of the main drivers to improving Connected Care for all in Saskatchewan is the ongoing development and maturation of Health Networks.
- Health Networks **are collaborative teams of health professionals**, including physicians, and community partners providing fully integrated services to meet the health needs of individuals and communities.
- Advancing Health Networks is about ensuring the **right care at the right time from the right health care provider as close to home as possible**.
- Health Networks are for internal use only to allow for better organization of services and resources to deliver more reliable and consistent care, tailored to the needs of individuals and communities.
- As Health Networks mature, people can expect better coordination and access to care.
